PROFESSIONAL SUMMARY

Full-Stack Developer specializing in building AI-native, production-ready web applications. Expert in React/Next.js and Node.js, with a focus on bridging complex backend logic with fluid, high-performance user interfaces. Proven ability to handle inconsistent data structures, manage complex state logic, and deploy scalable architectures.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, Framer Motion, PWA, Context API, Redux
Backend: Node.js, Express, REST APIs, JSON Validation, Data Filtering/Transformation
Databases/ORM: PostgreSQL, Prisma ORM, Firebase, LocalStorage (Offline-first architectures)
Tools & Core: Vercel, Git/GitHub, System Design, OS/DBMS Fundamentals, AI Agent Orchestration

KEY PROJECTS

Zep Menu | Modern Contactless Ordering Platform

[Live Demo](#) | [GitHub](#)

- Engineered a high-performance QR ordering platform using **Next.js** and **TypeScript**, reducing restaurant wait times.
- Architected a robust global state management system using **React Context** to handle real-time cart updates and dynamic pricing without re-renders.
- Implemented fluid micro-interactions with **Framer Motion**, ensuring a zero-friction, native-app-like web experience.
- Integrated **PostgreSQL** and **Prisma** for scalable menu management and order history tracking.

Underneath | Psychological Logic Engine

[Live Demo](#)

- Built a custom **Contradiction & Deduction Engine** in JavaScript to analyze gaps in human behavioral data (e.g., Logic vs. Ego).
- Designed the system to process abstract and inconsistent inputs, continuously adjusting user profiles in real-time.
- Utilized **React Hooks** to decouple complex logic from the UI, ensuring the application remains stable during heavy calculations.

Threat Detection System | Hackathon Project

[Live Demo](#)

- Developed a real-time safety dashboard to monitor and prioritize alerts for fighting, fire, and suspicious behavior.
- Built a **Node.js** backend to handle asynchronous data streams from surveillance APIs and sensors.
- Implemented a map-based visualization layer to guide operators in planning safe exit routes during emergencies.

Spending Store | Offline-First Expense Tracker

[Live Demo](#)

- Engineered a privacy-first **Progressive Web App (PWA)** that installs directly on devices and works fully offline.
- Implemented a symbol-based interface to eliminate user friction, focusing on high-speed expense logging.
- Managed 100% data ownership via local device storage, eliminating the need for cloud sync or external databases.

Bumblebee | Hybrid AI Voice Assistant

- Created a modular automation tool for system tasks (opening apps, system locks) using low-latency speech recognition.
- Implemented "Mood-based Automation" to trigger complex environment setups (e.g., "Let's Code") via single voice commands.

EDUCATION

Sri Vasavi Engineering College **2024 – 2028 (Expected)**

B.Tech in Computer Science and Engineering (4th Semester)

- Coursework: Operating Systems, Database Management Systems (DBMS), Algorithms, SQL, Data Structures.
